

## COURSE GUIDE: 2014-15

### DETAILS OF THE COURSE

Course:	Organic Chemistry II		
Code:	50902209	Plan:	Chemistry Degree (Program 2009)
Academic period:	2014-15	Degree Level:	Undergraduate Level
Academic year:	2nd	Type:	Mandatory
Period:	Second Semester		

### DISTRIBUTION OF HOURS

Credits:	6	Number of In-class Hours:	45
		Number of Out-of-class Hours:	105
		Total Hours:	150

### USE OF THE VIRTUAL PLATFORM:

Teaching Support

### PROFESSORS DETAILS

Name	<b>Iglesias Valdés-Solís, María José</b>		
Department	Department of Chemistry and Physics		
Building	Chemistry Building (CITE I) Ground Floor		
Office	270		
Telephone	+34 950 015035	Email	<a href="mailto:mjigle@ual.es">mjigle@ual.es</a>

## COURSE DESCRIPTION

### Contents

The course is a continuation of Organic Chemistry I. In this course, students complete the basic study of the organic compounds classified on the basis of functional groups. The course includes the properties, characteristic chemical reactivity and methods of preparation of amines, carbonyl and carboxylic compounds as well as their derivatives. It is expected that by the end of term, students will have acquired an overview of Organic Chemistry.

### Courses with which this course is related in the Undergraduate Program

- Chemistry
- Organic Chemistry I
- Experimental Organic Chemistry
- Advanced Organic Chemistry

### Previous knowledge

Knowledge of General Chemistry is a prerequisite. Knowledge acquired in the course Organic Chemistry I (OCI) will be the starting point for this course. Building on the concepts studied in OCI will be an essential activity to progress appropriately in Organic Chemistry II.

### Requirements set in the Plan

Being enrolled or to have passed the course Organic Chemistry I

## COMPETENCIES

### General Competencies

#### *Generic Competencies of the University of Almería*

- Problem Solving

Puede verificar la autenticidad, validez e integridad de este documento en la dirección:

PÁGINA

2/9

/1nvP1lcBcPg1RU3i33hRA==

### Other Generic Competencies

- Application of knowledge

### Specific Competencies

#### Cognitive (knowledge)

- To know the main types of chemical reactions and their most important features.
- To know how to provide a mechanistic interpretation of chemical reactions.
- To know the properties of aliphatic and aromatic compounds.
- To know the nature and behavior of the functional groups in organic molecules, particularly the aldehyde, ketone, carboxylic acid groups and derivatives.
- To know the reactivity of difunctional compounds.

#### Procedural/instrumental (applied knowledge)

- Capacity to solve problems of Organic Chemistry.
- Capacity for evaluation, interpretation and synthesis of data and chemical information.

### AIMS/LEARNING OUTCOMES

- Acquiring the capacity to apply the theoretical content of the course to the solution of problems related with the mechanisms of organic reactions, reactivity, properties and preparation of aromatic systems, aldehydes, ketones, amines, carboxylic acids and derivatives, as well as reactions of enolates and difunctional compounds.
- Knowing the most common organic chemical reactions.
- Having the capacity to relate the reactivity of the different types of organic molecules with their structural features.
- Being able to predict some fundamental properties and reactivity of aliphatic and aromatic compounds.
- Having the capacity to propose transformations of functional groups based on their reactivity.
- Having the capacity to propose simple synthesis of organic compounds through sequences of functional group transformations.

### SYLLABUS

#### Group of contents

AROMATIC COMPOUNDS

#### Contents/Topic

1. Arenes and aromaticity

Structure and properties of the aromatic compounds

- Structure and properties of benzene
- Criteria for aromaticity. Hückel's rule
- Aromaticity of ions, heterocycles and fused systems
- Spectroscopy of aromatic compounds

#### Teaching Method

<i>Organizational Mode</i>	<i>Learning Activities</i>	<i>Comments</i>	<i>In-Class/On line Hours</i>
Teaching Group	Lectures/participative		5.5
	Evaluation session		0.5
Work Group/Small Group	Problem based learning		4.0

#### Description of the autonomous work of the student

Review: Acidity-Basicity. Kinetic and thermodynamic control

#### MODE OF EVALUATION OF COMPETENCIES

##### Marking Criteria

METHOD A (Final exam) Any student enrolled in the course Organic Chemistry II may attend the final exams of the course (official call), according to the university regulations. Such exams will be in written format and both the generic and specific competencies will be assessed.

PÁGINA

7/9

/1nvP1lcBcPg1RU3i33hRA==

METHOD B (Continuous evaluation): Students performance will be graded as follows:

- 1) Periodical tests done during class time will contribute to 30% to the final grade
- 2) Exercises and problem solving, as well as supervised papers will contribute 25% to the final grade
- 3) Participation, defense of arguments and presentations will contribute 15% to the final grade
- 4) Periodical tests done through the “aula virtual” during the out-of-class time will contribute to 10% to the final grade
- 5) A final test (scheduled by the Higher Polytechnic School and the Faculty of Experimental Sciences) which requires a minimum score of 4 out of 10, will contribute 20% to the final grade.

Percentage of Evaluation of the Activities developed by the students

	Activity	(hours)	Percentage
I. ACTIVITIES OF THE STUDENT (In-class/ Online)	• Large Group	( 0 )	0 %
	• Teaching Group	( 26 )	20 %
	• Work Group/Small Group	( 19 )	30 %
II. OUT-OF-CLASS ACTIVITIES OF THE STUDENT (Autonomous work)	• (Team work, Individual work)	(105)	50 %

Evaluation Tools

- Test/Initial diagnostic interview
- Progress reports
- Tests, exercises, problems.
- Observation of the process.
- Final tests (written or oral).

Monitoring mechanisms

- Attendance of tutorials
- Attendance and participation in seminars
- Access to “Aula Virtual”
- Participation in communication tools (debate forums, emails)
- Submission of assigned work in class
- Submission of assigned work in “Aula Virtual”
